# Selecting the Right Product

Air Liquide offer a range of products to cater for all leisure businesses across the spectrum of gas requirements. Air Liquide products and the basis on which we supply them will vary to ensure that we supply the best solution for the customer.

# Choosing the Right Regulator

Air Liquide can supply a number of different regulators for use with different gases and equipment.

## Cylinders

Air Liquide offer a range of cylinder gases. We offer CO<sub>2</sub> and mixed gases in 30/70, 50/50 and 60/40 blends of CO<sub>2</sub>/Nitrogen. Air Liquide cylinders are supplied through wholesalers and most accounts should operate this way. Most cylinder accounts use brewery regulators, so will not have any other Air Liquide equipment on site other than cylinders.

## Sizing Guide

The best dispense method for any outlet is dependant on the needs of the business. In most cases, an assessment should be done on what will be the best product, prior to making a quotation. Typically this will be cylinders for the smallest outlets, then Enhancers up to a Drinks Dispense Unit (DDU) for progressively larger businesses.

## Enhancer Panel

The Air Liquide Enhancer Panel is the best solution in medium or large outlets that do not have a lot of gas pumps and/or are mainly using CO<sub>2</sub> dispense. Enhancer Panels should be supplied with large cylinders on a managed account basis.

If a large number of gas pumps are being used, consideration should be given to using a DDU.

## Nitrogen Drinks Dispense Unit (DDU)

This product is the top of the range of Air Liquide's drinks dispense products. The latest AS50C DDU generates nitrogen from the atmosphere. Coupled with CO<sub>2</sub> cylinders (with twin pigtail connections and switchover valve) it has integral regulators to allow dispense using CO<sub>2</sub> (for beers and ciders), 60/40 and 30/70 mixed gas.

## Carbon Dioxide Regulators for Beers and Ciders

These are used to reduce pressures from cylinder pressure to 35psi for the dispense of beers and ciders. The regulator product comprises of a single regulator but offers a twin connection with a switchover valve for added convenience. Regulators that offer the same functionality are already incorporated into the AS50C DDU and the Air Liquide Enhancer Panel.

Product code 24104085.

## Mixed Gas Regulators for Beers and Ciders

These are used to reduce pressures from cylinder pressure to 45psi for the dispense of beers and ciders. This regulator has only a single connection. Regulators that provide similar functionality are already incorporated into the AS50C DDU and the Air Liquide Enhancer Panel.

Product code 24104083.

## Carbon Dioxide Regulators for Soft Drinks

Air Liquide can supply regulators to facilitate connection of CO<sub>2</sub> at 80psi for postmix equipment. Product code 24103536.
