

Air Liquide supporting emissions compliance

Testimonial

Air Liquide has been supporting IRIS Emissions Services for many years. This generally involves the provision of calibration gases for continuous emissions monitoring systems (CEMS) and process analysers, that are installed on industrial plants and in the marine sector. These can be demanding applications and analyser performance (and therefore good service and maintenance) is critical to efficient plant operation and compliance.

“ Having a reliable, high quality supply of the calibration mixtures is paramount to our activity on a variety of industrial sites, most notably waste incinerators. Our clients expect our service and maintenance offering to be inclusive and pain free and having Air Liquide’s gases on hand is a key component to doing so. ”

Alison Sampson, co-owner and director at IRIS.

Air Liquide's calibration gases

As a partner to IRIS, Air Liquide understands the compliance regulations associated with the emissions monitoring (QAL1-3, AST, accreditation, etc.) and we are able to support IRIS from initial commissioning through to on-going operation and servicing.
